Decorative works of art created in the Islamic world have been prized for centuries for their beauty, refinement, harmony, intricacy, and complexity. Fine examples of Islamic Geometric patterns, from the sixth to the nineteenth century, can be found around the world. This lecture presents a selection of the geometric patterns studied by artist Thang Ngo in Andalusia, Morocco, and Egypt as part of the Art of Islamic Pattern school based in the United Kingdom. Thang will illustrate how Islamic artists applied their imagination to an underlying geometric framework to create the patterns in these outstanding works of art.
